## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments filed 4 February 2008 have been fully considered but they are not persuasive.

### *Claim Rejections - 35 USC § 102/103*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-13 rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over RO-115,885.

### Applicant's Arguments

The RO'885 does not anticipate nor rendered obvious the instant invention because the instant invention is a one-step process is taught with different starting materials and there is no teaching in RO'885 that would lead a person skilled in the art to applicant's advantageous method or modify the RO'885 process to obtain the instant process.

### Examiner's Response

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., one-stage process, pure insoluble medium-chain fatty acid, administration as a medicament) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Claim 1 as filed reads as follows:

1 (Original). A method of preparing a metal salt of a medium-chain fatty acid, wherein the method comprises solubilizing at least one free fatty acid in solvent, wherein said free fatty acid has a chain length from six to twelve carbons; and reacting said free fatty acid with at least one metal salt, to produce a metal fatty acid salt.

It is apparent the limitations referred to on page 2 of the response are not limitations currently contained in claim 1 therefore the argument regarding RO'885 not anticipating the invention base on these limitation is negated.

RO'885 teaches a process of making fatty acid salts wherein the fatty acid is reacted in the presence of a solvent and an alkali catalyst. The claims differ in that a specific fatty acid salt is name and a purification step is given. However, the reference anticipates the invention by teaching fatty acids as a whole. While no teaching specific fatty acids, the triglycerides taught contain the recited fatty acid within its structure and would inherent produce the specific fatty acid salt claimed.
